

GUNDRATHI LOKESH

Software Engineer · Java Full Stack · Distributed Systems & Microservices

Whitefield, Bengaluru | +91 93477 16674 | lokeshgundrathi@gmail.com | linkedin.com/in/lokeshgundrathi-9bab70237
| salesforce.com/trailblazer/lgundrathi

PROFESSIONAL SUMMARY

Software Engineer with ~2 years of production experience building scalable Java microservices and distributed systems. Proven track record delivering **ETL pipelines, event-driven architectures, and multi-tenant SaaS platforms** using Spring Boot, Apache Kafka, PostgreSQL, and MongoDB. Hands-on expertise in **AWS (SES, SQS, Lambda, Workspaces)**, CI/CD (GitHub Actions, Jenkins), container orchestration (Kubernetes, Docker Swarm), and full-stack observability (Grafana, Kibana, Elasticsearch). Experienced **Team Lead** with strong ownership of system design, code quality, and on-time delivery.

TECHNICAL SKILLS

Languages	Java (8, 11, 17, 21, 25), SQL
Frameworks	Spring Boot, Spring Security, Spring MVC, Spring Core, Spring Scheduler, Hibernate, JDBC, Servlets, JSP
Messaging / Streaming	Apache Kafka (producer, consumer, topic management)
Databases	PostgreSQL, Oracle SQL, MongoDB Familiar: Snowflake, ClickHouse
Cloud – AWS	SES, SQS, Lambda, Workspace Automation, S3
DevOps & CI/CD	Kubernetes (pod scaling, env config), Docker Swarm, GitHub Actions, Jenkins, Maven, Gradle
Monitoring	Grafana, Kibana, Elasticsearch
Security & Auth	Spring Security, JWT, Cookie Management, Multi-tenant DNS (A/CNAME records)
Design Patterns	Strategy, Factory, Singleton; RESTful API design, Async/WebClient
Frontend (Familiar)	React JS, HTML5, CSS3, JavaScript
Compression / Misc	Gzip compression, JSON Schema, WebClient (reactive HTTP), API gateway integration

PROFESSIONAL EXPERIENCE

Software Engineer — Java Full Stack InspironLabs · Bengaluru, Karnataka	Oct 2024 – Present (1 yr 8 mos)
- Led and delivered 4 production microservice systems — Provider Data Export, Provider Data Extract, DYP, and Foresight AI — from design through deployment. - Designed and owned ETL pipeline architecture orchestrating 6 microservices via Apache Kafka, enabling reliable daily bulk-data exports to AWS S3. - Built event-driven data extraction pipeline consuming real-time Kafka streams, aggregating data across multiple tables into target JSON schema, and delivering output to external systems via REST APIs. - Implemented Gzip compression on outbound data payloads, reducing transfer size and improving API throughput. - Integrated AWS SES for transactional email alerts on event failures and automated AWS Workspace provisioning via SQS + Lambda, eliminating manual setup overhead. - Engineered multi-tenant authentication using Spring Security, JWT session management, cookie handling, and DNS routing (A/CNAME records) for tenant isolation in production. - Developed a dynamic dashboard engine with runtime database connectivity supporting PostgreSQL, Snowflake, and ClickHouse — enabling multi-source analytics without code changes. - Monitored and maintained Lambda functions, Kubernetes pods, and Docker Swarm clusters; performed scaling, environment configuration, and log analysis via Grafana and Kibana.	

- Applied **Strategy and Factory design patterns** across services to improve code maintainability, testability, and extensibility.
- Built and maintained CI/CD pipelines using **GitHub Actions and Jenkins**; managed builds with both Maven and Gradle.
- Acted as **Team Lead**: conducted code reviews, led sprint ceremonies, and ensured on-time delivery of client-facing features.

KEY PROJECTS (Production — InspironLabs)

Provider Data Export | Spring Boot · Apache Kafka · AWS S3 · ETL · Kubernetes · Grafana

- **Problem:** Business required a reliable daily export of all updated provider records to downstream consumers.
- **Solution:** Designed an ETL pipeline orchestrating **6 microservices via Kafka** streaming; packaged output files and uploaded to **AWS S3** on a scheduled basis.
- Used Spring Boot for internal service-to-service communication; ensured fault-tolerance through Kafka topic replay.
- Monitored pipeline health, latency, and pod resource usage via **Grafana dashboards** and Kubernetes pod scaling.
- **Outcome:** Delivered zero-downtime daily exports with full observability and automated recovery.

Provider Data Extract | Spring Boot · Kafka · WebClient · Gzip · AWS SES · Kubernetes · Grafana

- **Problem:** Required continuous, scalable extraction of provider data from multiple sources and delivery to an external platform via API.
- **Solution:** Built a real-time Kafka consumer service processing **60–70 events/minute**, aggregating data across multiple tables into a target JSON schema and delivering to external systems via REST API.
- Engineered a **fault-tolerant retry mechanism**: failed events are automatically retried from Kafka; persistent failures trigger an **AWS SES alert email** to the operations team — ensuring zero silent data loss.
- Implemented **async non-blocking HTTP calls using WebClient** for downstream microservice communication, improving throughput under sustained load.
- Applied **Gzip compression** on outbound payloads, reducing payload size for faster API transfers.
- Monitored pipeline health via Grafana; auto-scaled Kubernetes pods based on Kafka consumer lag.
- **Outcome:** Production pipeline processing 60–70 events/min with built-in fault tolerance, zero silent failures, and full observability.

DYP (Internal Platform Service) | Spring Boot · Spring Scheduler · Kibana · Kubernetes

- Developed scalable REST APIs consumed by internal platform services.
- Implemented **Spring Schedulers** for time-based background job execution.
- Monitored application logs and errors using **Kibana**; managed Kubernetes pod lifecycle and environment configuration.

Foresight AI (Multi-Tenant SaaS Platform) | Spring Boot · Spring Security · JWT · AWS (SES, SQS, Lambda, Workspaces) · PostgreSQL · Snowflake · ClickHouse · Docker Swarm · GitHub Actions

- **Problem:** Platform required secure multi-tenant access, dynamic analytics, and automated cloud infrastructure provisioning.
- Implemented **JWT-based auth with Spring Security**, cookie session management, and multi-tenant **DNS routing (A/CNAME)** for production tenant isolation.
- Built a **dynamic dashboard rendering engine** with runtime database switching across PostgreSQL, Snowflake, and ClickHouse — enabling multi-source reporting without redeployment.
- Automated **AWS Workspace provisioning** end-to-end: SQS trigger → Lambda execution → Workspace creation, eliminating manual cloud setup.
- Deployed and managed services via **Docker Swarm** with GitHub Actions CI/CD pipelines; monitored Lambda and containers via Kibana.

- **Outcome:** Production SaaS platform with automated infrastructure, secure multi-tenancy, and real-time analytics across heterogeneous data sources.

EDUCATION

B.Tech – Computer Science & Engineering	2020 – 2024
Sri Venkateswara College of Engineering, Tirupati	CGPA 8.37
Intermediate (MPC)	2018 – 2020
Sri Chaitanya Junior College, Chittoor	9.73 / 10

CERTIFICATIONS & TRAINING

- Full Stack Java Developer – JSpiders (Feb 2024 – Oct 2024)
- Core Java – Internshala (2024)
- Java Programming – Great Learning (2024)
- Salesforce Developer — Trailhead Learner/Developer Track (Jul 2023 – Aug 2024) | Hands-on: CRM workflows, Apex triggers, Lightning Web Components, platform fundamentals | salesforce.com/trailblazer/igundrathi

LEADERSHIP & ACHIEVEMENTS

- Team Lead — coordinated sprint planning, code reviews, and cross-team delivery at InspironLabs
- Innovation Club President & Treasurer – Sri Venkateswara College of Engineering
- Coding Club Treasurer – Sri Venkateswara College of Engineering
- Event Coordinator – Ample 2022 & Ample 2023, SVCE
